1. Introduction

What is the SHLAA update report?

The National Planning Policy Framework (NPPF) obliges local planning authorities to draft and publish a Strategic Housing Land Availability Assessment or SHLAA. The SHLAA outlines the council's approach to housing, showing actual and potential housing sites that form the housing land supply for the period covered by the statutory development plan (in this case the NewcastleGateshead Core Strategy and Urban Core Plan) which will be up to the year 2030. The Core Strategy and Urban Core document forms a part of our Local Plan and it is currently anticipated that the document will be adopted in 2014.

The Gateshead Strategic Housing Land Availability Assessment was originally published in October 2010 with a supplementary update being carried out in July 2012. This report comprises a further update that is being carried out on an annual basis.

What is the scope of the SHLAA update?

The SHLAA update includes;

- An assessment of additional sites identified since the July 2012 SHLAA draft update report was published;
- An updated review of potential housing sites identified across Gateshead with new information, and, if appropriate, a revised assessment of suitability, availability, deliverability and developability;
- An update of the amount of new housing that is 'likely to come forward' i.e. applications for residential development received and/or determined) from 30th April 2012 until the 30th April 2013.
- An update on other factors affecting housing delivery such as funding issues.
- Feeding in the results and findings of the Strategic Land Review and Green Belt Assessment report.

What is the purpose of the update report?

The findings of the SHLAA update report will inform the generation of policies for housing delivery over the next twenty years or so that will be contained within the NewcastleGateshead Core Strategy and Urban Core Local Plan Document and the 'Making Spaces for Growing Places' (land allocations, designations & DM policies) Local Plan Document. Additionally the update will give an indication of the potential housing sites that would need to be brought forward for development in order to maintain the Borough's five year supply of deliverable housing sites.

The SHLAA update report will deliver the following key outputs;

- A re-assessment of the suitability, availability and achievability of the new sites submitted to the SHLAA update;
- A revised list of specific deliverable sites that constitute Gateshead's five year supply of housing land for the first five years of the One Core Strategy plan period (2013-18) using information on new planning applications received and/or determined up to 30th April 2013; and
- Commentary on the key changes to the information base since the initial SHLAA was prepared, including any progress on sites identified as suitable, available or achievable.

It should also be noted that the identification of sites in the SHLAA as suitable and deliverable or suitable and developable does not automatically mean that those sites will be allocated for housing development. Other spatial planning policy considerations are taken into account (such as the sequential approach to housing located in areas of flood risk) and the spatial strategy as set out in the Core Strategy. What the SHLAA provides, is a transparent and comprehensive technical piece of evidence relating to the suitability, availability and achievability of on the one hand sites that have been identified as allocations and on the other, those that have been rejected in the site selection process.

It should also be noted that all of the information contained within this report encapsulates a 'snapshot' as at the 30th April 2013 and that information regarding the status of applications, permissions (commitments), and additional information, regarding (for example) constraints to development is accurate for the time period covered.

Additional factors affecting this report since the original SHLAA report was published are as follows;

- The recent revocation of Regional Spatial Strategy (RSS).
- National Planning Policy Framework (NPPF).
- Revised population projections (ONS), Household Interim Projections 2011 and Census 2011 data.
- Strategic Housing Market Assessment (SHMA).
- Revised Viability Assessment Methodology.
- Strategic Land Review/Green Belt Assessment Stage 3 Report and associated development framework.
- MetroGreen Topic paper and forthcoming Area Action Plan.
- Urban Core Area Action Plan.
- Exemplar Neighbourhood Concept Framework.
- Draft Gateshead Housing Strategy 2013-18.
- Joint Venture – Gateshead Renaissance Regeneration Initiative.

2. Methodology

This update report uses the same methodological approach for assessing and reviewing potential housing sites as that used in previous versions of the SHLAA in line with the Tyne and Wear methodology.

Certain sites have been updated based upon new information and desk-based work carried out by Council officers. The results of which are displayed in the appendices. The update report also refers to the MetroGreen Topic Paper that will be published for consultation. An assessment has been carried out on sites put forward by consultees and stakeholders, the result of which has been included in the suitable site schedules contained within Appendices 1 and 2.

Approach to Suitability, Availability and Deliverability

Using the same approach as in previously prepared SHLAA reports, Gateshead officers took account of national, regional and sub-regional guidance in assessing whether or not sites should be considered as suitable, available or achievable in the update (including comments on the achievability of sites obtained from stakeholders). Additionally, as the NewcastleGateshead One Core Strategy is not anticipated to be adopted before 2014, the decision was taken that for sites to be considered deliverable, they would have to be deliverable from April 2013, and that sites considered developable would be assigned to the five year periods 2018-23 or 2023-28.

Net developable area and density assumptions

A set of assumptions were made in relation to the percentage of a site that was considered to be developable as opposed to the full gross site area. This was in order to take into account ancillary uses such as access, open space or children's play areas. Further, it was consequently assumed that the proportion of the site given over to ancillary uses would be significantly higher for larger sites with a greater potential yield as set out in table 2.1.

Table 2.1 Net Developable Areas.

Gross Site Area	Net Percentage
less than 0.4 hectares	100%
0.4 to 2 hectares	90%
over 2 hectares	75%

Table 2.2 Annual build rate assumptions.

Annual rates of construction	
Under 250 dwellings	30 per annum
Over 500 dwellings	50 per annum
between 250 and 500 dwellings	40 per annum

The density multipliers and site yield assumptions in table 2.2 and table 2.3 have been used in previous versions of the SHLAA in 2012 and 2010. These were formulated through an initial agreement by the Tyne and Wear SHLAA stakeholder group in mid-2008 then through subsequent agreements reached by the SHLAA steering group in 2009 and 2010. These assumptions were then carried forward for the 2012 draft SHLAA update and also for this update report.

Table 2.3 Site yield assumptions.

Proximity to Town/District Centre or Metro/Train Station	Dwellings per hectare
Under 750 metres	50
750 - 1000 metres (1kilometre)	40
Over 1 kilometre	30

Revised methodology for assessing residential development viability.

As part of the Local Plan process we have prepared a draft charging schedule for the Community Infrastructure Levy (CIL) and a viability assessment was also carried out as a part of this process. The CIL draft viability assessment report has outlined where the most viable development sites are across the Borough which gives us an indication of likely locations for housing development to come forwards. This work also ties in with work done that identifies suitable land for housing as part of our strategic housing land availability assessment (SHLAA).

The issue of development viability is one of increasing importance in the planning system both in determining planning applications and for the preparation of development plan policies. With regard to housing, there are implications for where we can realistically deliver sites for residential development due to the poor state of the housing market.

The land within Gateshead has been divided into Value Zones for residential development based on assumptions within our revised viability model which has been formulated by suitably qualified surveyors from both Gateshead and Newcastle Councils. The zones were identified using a combination of value/revenue information and geographic boundaries, such as the urban boundary, City Centre, Green Belt and major roads. This produced clear, hard edged and not overly complex boundaries. These are outlined in Table 2.4.

Table 2.4 Residential Value Assumptions

Residential Values		High	High-Mid	Mid	Low-Mid	Low
		Zone1	Zone 2	Zone 3	Zone 4	Zone 5
Average Rate £/m2		2500	2100	1800	1425	1200
	Size (m2)	Sales Values (£/Unit)				
1 bed flat	45	112500	94500	81000	64125	54000
2 bed flat	60	150000	126000	108000	85500	72000
3 bed flat	75	187500	157500	135000	106875	90000
2 bed house	70	175000	147000	126000	99750	84000
3 bed house	84	210000	176400	151200	119700	100800
4 bed house	121	302500	254100	217800	172425	145200

The revised model is based on assumptions of cost, such as professional fees and marketing costs. The revised assessments have incorporated approximate build costs, policy costs (section 106 agreements) and others such as abnormal costs, professional fees, and site acquisition fees for example. For further information on the viability assessment model please see the draft Viability Assessment Report.

Re-assessment of open space sites.

Open spaces that are readily accessible to the public are widely recognised as being of fundamental importance to health and wellbeing. Open spaces serve a wide range of functions and can make a significant contribution to visual amenity of urban areas. Whilst the strong network of green spaces complement many of the residential areas it is acknowledged that some green spaces may have little value for the communities they are located within.

This is something we are looking at through our playing pitch strategy and open spaces audit. In accordance with the National Planning Policy Framework, our emerging Open Space Assessment quantifies the amount of open spaces in each residential neighbourhood in Gateshead, and also assesses the quality of open space, applying widely used criteria. Findings from this assessment of quality and quantity are then compared to the needs of residents, and population levels to identify locations where there may be a surplus or deficiency of open space provision. The findings of our Open Space Assessment will be consulted on as part of our Local Plan consultation. We have also consulted on our emerging evidence base at each stage of the Local Plan preparation process. This included publishing the findings of our Green Infrastructure Study.

Detailed policies on open space, sport and recreational facilities will be contained within *Making Spaces for Growing Places*. Consequently, our Open Space Assessment is being prepared as part of the evidence base for this element of Gateshead's Local Plan, rather than for the Core Strategy. This will inform subsequent iterations of the SHLAA where appropriate.

Strategic Land Review/Green Belt Assessment (SLR/GBA).

The Strategic Land Review/Green Belt Assessment Stage 3 report has been published alongside this SHLAA update report. The list of preferred potential housing sites on land currently designated as green belt and their likely phasing are contained within appendix 1 which shows the full schedule of housing supply for the plan period. The Strategic Land Review/Green Belt Assessment sites have a revised potential capacity of approximately 2421 dwellings.

3. Overall outputs of the assessment

Information that affected the suitability, availability and achievability of some sites has been collated by Council officers since July 2012. The results of these assessments can be found in Appendix 2. Since the publication of the draft SHLAA update report in July 2012 a number of planning applications for residential development have been granted. These have been incorporated into the SHLAA update and have informed the assessment of relevant sites which have normally been classed as being suitable and deliverable. The full list of suitable and deliverable sites can be found in the site schedule contained within Appendix 1.

The National Planning Policy Framework (NPPF) stipulates that Local Planning Authorities should encourage the effective use of land by reusing brownfield land, provided that it is not of high environmental value. The other core planning principles contained within the NPPF also stipulate that the roles and character of different areas should be taken into account whilst promoting the vitality of our main urban areas and protecting the green belts around them (para 17). The tables that follow show the likely suitable, deliverable and developable sites within Gateshead that will come forward within the plan period up until the year 2030.

Overcoming Constraints

Many of the sites that were found to be suitable but not deliverable/developable were considered to have constraints on their development. This either means that they have not been considered to be developable within the plan period or that their delivery would be later in the plan period than would otherwise have been the case. The identified constraints are not considered to be insurmountable and could normally be overcome with appropriate mitigation or adaptation measures. Other sites were not considered available as they were not put forward for development by the landowner or on Council sites where there was no resolution to dispose or surplus declaration.

Northumbrian Water have indicated that in all cases, they advise that capacity checks for both water supply and wastewater/sewerage would be needed as development plans become more certain. Similarly Natural England advise that prior to development taking place, all sites are fully assessed for the presence of or use by protected species, in particular great crested newts. The emerging Gateshead Strategic Flood Risk Assessment (SFRA) provides additional information that has informed the findings of this report.

Analysis

Following analysis of the new information gathered in preparing this update, a total of 63 sites (*including existing sites, updated sites and new sites*) were assessed as being suitable for potential residential development. They have an estimated capacity to deliver approximately 4854 new dwellings. Table 3.1 below gives an overall breakdown of the amount of housing to be delivered within specific five year periods. For further detail please also see Appendix 2.

Table 3.1 – Suitable Sites Capacity 2013.

Suitable and Deliverable (Yrs 0-5)	1169
Suitable and Developable (Yrs 6-10)	2222
Suitable and Developable (Yrs 11-15)	1316
Suitable and Developable (Yr16+)	147
Total Suitable Site Capacity	4854

A number of constraints were identified as being likely to delay or prevent sites assessed as suitable or available from being brought forward for development, and actions are identified as being in place to address some of these. The willingness of landowners to sell, and of housebuilders to build in the current market were identified as key constraints, as were the lack of resolutions to dispose and continuing uncertainty. Clearing contamination will likely prove to be a significant constraint on several identified sites which may be ameliorated somewhat should the price of land rise in the medium to long term.

A number of sites within the existing urban area of Gateshead have been re-assessed using our revised development viability model. A number of sites came out as being unviable. Some other sites have also been removed from the assessment as they are now either no longer available for residential development or the delivery assumptions (such as site yield) may have changed due to updated information. Others have been included in our completions numbers or within our list of sites with extant planning permission where relevant.

We have also revised our assumptions on the numbers of dwellings that could come forward from sites formerly protected for employment uses, the numbers that could come forward through windfall housing and the redevelopment of land around the MetroCentre. This has been counterbalanced with revised yield assumptions on a number of our sites including our joint venture sites and at Baltic Business Quarter that have added new capacity. For a full explanation of each site assessment please see Appendix 2.

Table 3.2 Additional developable sites or those with increased capacity.

Ref.	Site name	Reason	No. of units gained.
G191a	Baltic BQ	Baltic Business Quarter considered suitable for mixed use.	200
G199	Fewster Square	Being brought forward by joint venture.	24
G221	Former Shirt Factory Pelaw	Planning application approved.	36
G222	Hyde Park	Increased capacity from Joint Venture.	10
G242	Bensham Grove Nursery	Increased yield assumption.	6
G267	Chopwell Heartlands	Increased capacity from Joint Venture.	141
G273a	Horsecrofts, Fountain Lane, Blaydon	Planning application approved.	7
G3	Whitley Court	Increased yield assumption.	10
G319	Mount Pleasant Social Club	Declared surplus.	12
G34	Beacon Lough East Joint Venture Site	Increased capacity from Joint Venture.	8
G340	5.4 Boulevard South	Increased capacity from Joint Venture.	42
G350	Site 1 New Chandless	Increased capacity from Joint Venture.	124
G354	High Spen Industrial Estate (South)	Planning application approved.	30
G41	Leaffield House	Being brought forward by joint venture.	14
G54	JV clearance site, Saltwell	Increased capacity from Joint Venture.	18
G55	Bensham and Saltwell - Kelvin Grove	Increased capacity from Joint Venture.	4
G74	Freight Depot	Increased capacity from Joint Venture.	57
G86	Opposite Coltsfoot Gardens, Whitehills Drive	Increased capacity from Joint Venture..	8
G91	Broadway	Revised yield estimate.	4
GN44	Former St Agnes School	Revised yield estimate.	9
GN63	Rockmore Road	Planning application approved.	15
Total			779

Table 3.3 Sites no longer viable, developable or with reduced capacity.

Ref.	Site Name	Reason	No. of units lost
G1	Brandling Village	Reduced yield assumption.	24
G119	MU5 & MU6 - Askew Road (East & West), Bensham	Viability assessment negative.	125
G12	Dixon St, Teams	Reduced yield assumption	7
G164	Carr Hill Reservoir, Causeway, Gateshead	Reduced yield assumption	11
G169	Land off Wellington Rd / St Omers Rd, Dunston	Viability assessment negative.	75
G175	West of St Omer's Road	Viability assessment negative.	49
G180	Former Morrisons Depot, Abbotsford Rd, Felling	Accessibility constraints/ surrounding uses	208
G2	East of Elgin Road, Carr Hill	Reduced yield assumption.	22
G255	Land to rear of Cemetery, Windsor Road, Birtley	Viability assessment negative.	53
G260	Market Lane, Dunston	Viability assessment negative.	4
G288	Regent Garage (Swalwell) , Hexham Road, Whickham	Viability assessment negative.	12
G299	Rose And Shamrock Hotel, Fell Bank, Birtley	Site developed.	18
G309	Land at Hallgarth Road, Winlaton	Viability assessment negative.	11
G313	Airey Housing Estate, Kibblesworth	Moved to extant permissions.	148
G333	Site Of Ravensworth Gardens, West Of 8-28, Ravensworth Road	Viability assessment negative.	18
G358	H3.62 Northside, Birtley	Reduced yield assumption.	2
G359	H3.7 South of Cooperative Terrace, High Spen	Moved to extant permissions.	76
G36	Site Of Former Social Club, Elysium Lane	Moved to extant permissions.	19
G362	MU 9 Hawks Rd / South Shore Rd	Reduced yield assumption.	115
G374	Land at Hookergate Co-op	Viability assessment negative.	5
G4	Hallgarth	Reduced yield assumption.	6
G5	Elisabethville	Reduced yield assumption.	4
G57	Site Of 6-24, Avon Street	Reduced yield assumption.	1
G6	Ravenswood	Reduced yield assumption.	2
G66	Site of Derwent Tower Ravensworth Road	Reduced yield assumption.	8
G90	Rowlands Gill Infants' School, Rowlands Gill	Reduced yield assumption.	6
GN14	Former Deckham Hotel	No longer available.	8
GN19	Junction of Chelsea Gardens and Bayswater Road, Deckham	Viability assessment negative.	12
GN20	Junction of Chelsea Gardens and Kingston Road, Deckham	Viability assessment negative.	7
GN21	Kingston Road, Deckham	Viability assessment negative.	7
GN24	Swallow Hotel	No longer available.	28
GN28	Former Lyndholme Nursing Home	No longer available.	18
GN29	Former Blaydon PCT building	Site being developed – moved to extant permissions.	7
GN30	Former Police Station/Magistrates Court	No longer available.	15
GN33	Park Gate Farm, Winlaton	No longer available.	13
GN43	Site of Eslington Villa Hotel	No longer available.	34
GN46	Malton green Village Hall	Reduced yield assumption.	54
GN47	Knox-Wilkin Grain Merchants	Viability assessment negative.	8
GN48	Junction of Croft Close/Cushy Cow Lane, Ryton	Moved to extant permissions.	4
GN5	Site of the Beacon Public House	No longer available.	14
Total			1258

Identifying a five year supply of specific deliverable sites.

The National Planning Policy Framework (NPPF) gives national planning policy guidance and paragraph 47 is of particular importance and relevance when considering the supply of housing land.

Strategic Housing Land Availability Assessments (SHLAAs) must be prepared to identify the supply of deliverable sites which can provide for five years worth of housing land against each authority's requirement. The National Planning Policy Framework (NPPF) requires local authorities to boost their supply of housing by annually identifying and updating a supply of specific deliverable sites that are sufficient to provide five years worth of housing against their identified housing requirement (i.e. the five year housing supply) with an additional buffer of 5% to ensure choice and competition in the market for land. It is also required that this additional buffer of sites to be moved forward from later in the plan period.

Additionally, there would be a requirement to increase the buffer to 20% where there has been a record of persistent under-delivery in the past. Both the 5% and the 20% buffer would also required to be moved forward from later in the plan period in order to provide a realistic prospect of achieving the planned supply and to ensure choice and competition within the land market. There is currently no clear definition as to what constitutes persistent underperformance. Informal discussions with the Planning Inspectorate indicate that performance could be assessed over a ten year period set against the Regional Spatial Strategy (RSS) or the Council's own revised targets (after the revocation of RSS).

As a result of the economic downturn, authorities are increasingly finding difficulties in maintaining a five year land supply against housing requirements. Designations (such as green belts) that have been discounted from the SHLAA process are now increasingly having to be considered as potentially viable options to help deliver housing requirements and meet the five year deliverable and fifteen year developable supply targets (through plan making processes such as the Strategic Land Review/Green Belt Assessment).

With regard to the five year supply, Paragraph 47 of the NPPF specifies that a 5% additional buffer brought forward from later in the plan period is a prerequisite. Whether or not you require a 20% buffer or not depends on how persistently you have under-delivered against your targets. There is no definitive target to measure against and it would appear that some common sense should be applied. We have taken the approach of analysing our housing delivery over the last decade to determine whether or not we have persistently under-performed or not against our housing supply targets. A windfall allowance of 50 dwellings per annum has also been factored into the supply as this is consistent average of windfall delivery over the last ten years (see table 3.6). Table 3.2 sets out the forecast indicative supply of new housing over the next five years. For a full list of deliverable/developable sites see Appendix 1.

Table 3.4 Indicative 5 year supply of housing land July 2013.

Residual 5 Year Housing Requirement 2013-18 (including 20% buffer)	3608
Deliverable SHLAA sites (0-5 years)	1169
Remaining Capacity on Existing Sites with Planning Permission	1386
Windfall Allowance	250
TOTAL 5 year supply of land in Gateshead Borough	2817
Supply as a percentage of the residual requirement	78%

As set out in Table 3.4 it would appear that we have failed to meet our housing supply targets for six out of ten years of the last decade i.e. a 60% failure rate (or alternatively a 40% pass rate – see Table 3.7). Consequently, it is likely that we would require a buffer of 20% to be added to our five year housing land supply requirement (in essence a six-year supply). That being said, the completions figures and supply trajectory indicate that our build rates are on an increasingly upwards trajectory and have been since 2010/11 (see Figure 3.1).

Based on the available data, our figures currently indicate that we have a housing land supply of approximately 78% of the five year target (when including the 20% additional buffer) equating to approximately 3.9 years of housing supply. This is similar to 2010 where we had a 5 year supply of approximately 85% of the RSS requirement. If we were not persistently underperforming and only required a 5% additional buffer, then we would have approximately 96% of our 5 year supply requirement of approximately 2936 dwellings. Our residual housing requirement (3608) comprises the overall requirement 2010-18 (3360); minus completions 2010-13 (1249); minus empty homes brought back into use 2010-13 (420); plus losses from 2010-13 (617); plus the 20% additional buffer (672); plus under-provision from 2010-13 (628) – see Table 3.5 below.

Table 3.5: Residual 5 Year Requirement.

Overall Requirement 2010-18	3360
minus completions 2010-13	1249
minus empty properties brought back into use 2010-13	420
plus losses 2010-13	617
plus 20% buffer	672
plus under-provision 10-13	628
Residual requirement 2013-18	3608

Our five year housing supply could potentially be supplemented through the use of the NewcastleGateshead Housing Investment Plan to bring forward suitable sites from later on in the plan period in order to demonstrate a deliverable supply and provide the additional buffer of sites as required by paragraph 47 of the NPPF.

Figure 3.1 Historic Housing Delivery for the last decade.

4. Conclusions

After the revocation of the Regional Spatial Strategy (RSS) for the North East on the 15th of April 2013 the former housing targets which it prescribed are no longer a part of the statutory development plan for Gateshead (the Local Plan). Consequently for the calculation of our housing requirement and supply we have taken the year 2010 as the baseline as this is the beginning of the plan period. We have included an additional requirement within our 5 year supply which covers past under-provision. We have also measured our past performance in terms of housing delivery against past targets (including RSS) for the ten year period from 2002 until 2012.

The promotion of economic viability to a position of prominence in the National Planning Policy Framework (NPPF) places a responsibility on Local Planning Authorities to ensure that their housing sites are realistically deliverable. This means that we must ensure that a viability assessment has been undertaken and has factored in the relevant land value, development costs and policy costs. The removal of national government funding for urban renewal and regeneration projects has meant that the delivery of housing in lower value urban areas has become increasingly difficult. However, the Council through the Joint Venture regeneration initiative has managed to work with delivery partners to bring forward a number of sites across the Borough during the plan period with a total of 2400 new homes potentially being delivered. These have been included within the SHLAA. As mentioned previously we have re-assessed a number of sites within the existing urban area of Gateshead using our revised development viability model. These sites were re-appraised in relation to the likelihood of residential development being brought forward within the context of the current and likely future state of the housing market taking into account relevant cost assumptions.

Overall, compared to the 2012 draft SHLAA update approximately 47 sites have been removed from the assessment with a loss of approximately 1200 dwellings. However, this has been counterbalanced with approximately 780 extra dwellings being added to the assessment through revised yield assumptions on a number of our sites including our joint venture sites and at Baltic Business Quarter. This means that the difference between the 2012 draft SHLAA update and the 2013 update is approximately 480 dwellings despite over 1200 dwellings being discounted this time round. We have also revised our assumptions on the numbers of dwellings that could come forward from sites formerly protected for employment uses and this has been factored into the 2013 SHLAA update.

Based on previous delivery (see Table 3.6) we made a windfall assumption in the 2012 draft update that approximately 520 dwellings (65 per annum) would be delivered in the last 8 years of the plan period. However, this is now less certain to be the case and in line with government guidance we have revised this to a more conservative estimate of approximately 250 dwellings to be provided within the 5 year period 2013-18 (please see Table 3.4 and Appendix 1).

Further, the revised viability assessment and delivery assumptions have also had an effect on sites outside of the SHLAA assessment. This applies to our assumptions around MetroGreen which has reduced in potential capacity from approximately 1000 dwellings within the plan period (2012 SHLAA) to approximately 850 dwellings in the revised update (2013). In addition, government guidance specifies that windfall housing cannot be included within the first ten years of a SHLAA. Consequently, our urban site capacity from the SHLAA sites, previous completions, extant permissions, windfall delivery and MetroGreen amounts to approximately 8600 dwellings to be provided within the plan period.

Table 4.1 estimated urban housing land supply for the period 2010-30

SHLAA suitable sites capacity	4854
Extant permissions capacity 2013	1391
Completed sites 10-13 (est.)	1249
Windfall allowance	250
MetroGreen	850
Urban Site Capacity	8594

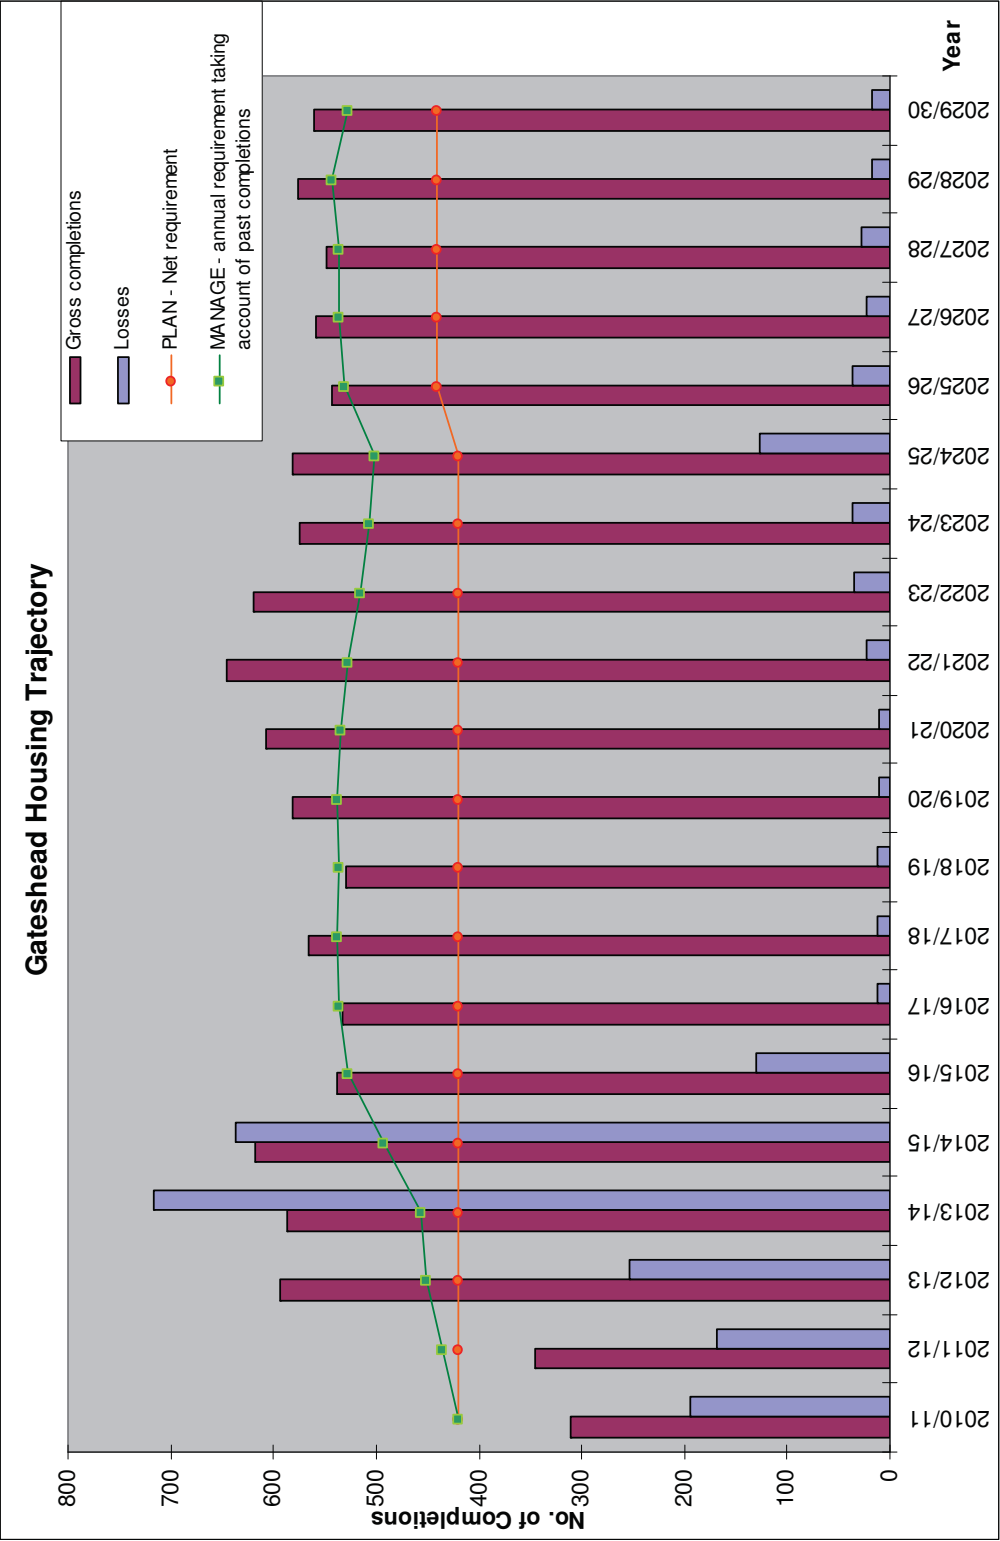

The 2011 Census data showed Gateshead had a population of around 200,300 in mid-2011. This is around 8,000 higher than previous official population estimates for Gateshead. The latest population projections from ONS (2011-based 'interim' projections) show population growth of around 6,700 between 2011 and 2021. St Chad's College, Durham Business School have been commissioned to extend population projections to cover our plan period.

The level of housing growth presented in our preferred growth scenario (11,000 gross new homes over the plan period) is lower than that consulted upon in our Proposed Major Changes Report, which used 2010-based population projections and 2008-based household projections to calculate anticipated growth of around 13,200 gross additional homes over the plan period. Our current anticipated shortfall over the plan period (approximately 2400 dwellings) is also lower than that previously identified by the 2012 draft SHLAA update (approximately 3100 dwellings).

Table 4.2 estimated housing supply shortfall for the period 2010-30

Gross Housing Requirement (including projected losses)	11000
Urban Site Capacity	8594
Shortfall	2406

Figure 4.1 Incremental, cumulative housing trajectory projection based on extant planning permissions, recent completions, SHLAA site appraisals, the SLR and other housing supply assumptions.

Aspirations for mixed use/commercial, but residential may be more deliverable. Currently operational - Cabinet have approved disposal for retail development.	n/a	Suitable but not developable / deliverable	0
G208	Windmill Hills School	Bensham Road	Bridges	1.4	DC/08/01520/GBC	Two constraints requiring mitigation: 1) Other constraints (access); 2) Traffic congestion (peak periods);	SITE SUITABLE, SUBJECT TO MITIGATION	Gateshead Council-owned site. GMBC consider that this site is unlikely to become available for housing and is earmarked for alternative, community-based use. Green space retention needed to counter lack of it in the area. This is highlighted in the Neig	Site could potentially come forward for housing provided that the open space and playing pitch and community use issues were satisfactorily resolved. Not likely in short to medium term.	Suitable but not developable / deliverable	0

Ref.	Site Name	Site Address	Ward	Net Area (ha)	Planning Application No	Physical/Policy Constraints	Suitability	Availability	Achievability	Conclusion	Yield
G209	White House Way	White House Way, Windy Nook	Windy Nook and Whitehills	0.7	n/a	One constraint precluding development: 1) Designated Open Space. Three constraints requiring mitigation: 1) Within a Wildlife Corridor; 2) Over 1km to Local Centre; 3) Over 1km to GP.	SITE COMPRISES DESIGNATED OPEN SPACE - UNSUITABLE	Gateshead Council-owned site. GMBC consider site to be immediately available, although rationalisation of urban green space required to make deliverable.	n/a	Unsuitable	0
G21	Combined site of Industrial Estate, MU22, Riverside and former Harrisons Slipway.	Reay Street, Bill Quay	Pelaw and Heworth	1.6	n/a	One constraint that would prevent development: 1) Topography (Steep banks towards river). Five constraints requiring mitigation: 1) Located within a Wildlife corridor. 2) Contaminated land (former industrial use contamination likely); 3) Other constrain	ONE CONSTRAINT THAT CANNOT BE MITIGATED AND SEVERAL THAT WOULD REQUIRE INDIVIDUAL MITIGATION MEASURES - UNSUITABLE	Site comprises cleared land. No ownership details available.	n/a	Unsuitable	0
G210	Garage Block	William Morris Avenue, Rowlands Gill.	Chopwell and Rowlands Gill	0.3	n/a	One constraint precluding development: 1) Green Belt. Five constraints requiring mitigation: 1) Traffic Congestion; 2) over 1km to Local Centre; 3) Over 1km to GP; 4) Contamination; 5) Other constraints (access; neighbouring ancient woodland)	SITE COMPRISES GREEN BELT LAND - UNSUITABLE	Gateshead Council-owned site. GMBC consider site to be immediately available as garage considered to be surplus.	n/a	Unsuitable	0

Ref.	Site Name	Site Address	Ward	Net Area (ha)	Planning Application No	Physical/Policy Constraints	Suitability	Availability	Achievability	Conclusion	Yield
G211	Garage Block	Barkwood Road East, Rowlands Gill	Chopwell and Rowlands Gill	0.3	n/a	Four constraints requiring mitigation: 1) partially within non-designated Open Space; 2) Traffic congestion; 3) Utilities constraints; 4) Other constraints (beside Ancient Woodland)	SITE SUITABLE, SUBJECT TO MITIGATION - MAY REDUCE SITE AREA	Gateshead Council-owned site. Garage surplus to requirements and considered available. Not yet declared surplus. NO RESOLUTION TO DISPOSE - CABINET REPORT REQUIRED - NOT CONSIDERED DEVELOPABLE AS A RESULT.	Area of higher market demand and adjacent to a residential area. Adjacent to ancient woodland, which may affect site size and attractiveness to house builders.	Suitable but not developable / deliverable	0
G212	Garage Block	May Avenue, Winlaton Mill	Winlaton and High Spen	0.4	n/a	One constraint precluding development: 1) Green Belt. Five constraints requiring mitigation: 1) Topography (sloping); 2) Wildlife Corridor; 3) Over 1km to Local Centre; 4) Over 1km to GP; 5) Other constraints (Adjacent to Lands Wood LWS)	SITE COMPRISES GREEN BELT LAND - UNSUITABLE	Gateshead Council-owned site. Garage surplus to requirements and considered available.	n/a	Unsuitable	0

GN24	Swallow Hotel	Gladstone Terrace/High West Street, Central Gateshead	Bridges	0.6		Views in out of Coatsworth conservation area; Priority Neighbourhood open space; Telecoms on roof; Much needed large family affordable housing by Jewish Community in this area	High quality design of scheme would make it more acceptable	N	Viability assessment was positive, site would be suitable and achievable subject to appropriate mitigation however not considered available	Suitable but not developable / deliverable	0
GN27	Clasper Village	Dunston, Gateshead	Dunston and Teams	3.5		Need to consider impact on the Tollhouse and the artworks adjacent to it. Noise.	Provides opportunity for enhancement. There are spectacular views of the Tyne river gorge, the bridges and Newcastle.	Y	Site is in an area of demand with attractive views, viability assessment positive	Suitable and Developable	173
GN28	Former Lyndholme Nursing Home	Durham Road, Low Fell	Low Fell	0.4		Boundary with Low Fell Conservation Area and setting of grade II listed building. High quality design and materials required to enhance character and protect heritage asset.	Would be suitable for housing - a development brief document has been prepared.	N - home being refurbished	Viability assessment positive, development brief being prepared for the site. Site not currently available	Suitable but not developable / deliverable	0
GN3	Murphy's Garth	Bassetts Pond, Northside, Birtley	Lamesley	1.4	DC/05/00883/FUL	Green belt - impact on openness and character.	Unsuitable - within green belt	N	Viability assessment positive however site not suitable due to green belt designation	Unsuitable	0

Ref.	Site Name	Site Address	Ward	Net Area (ha)	Planning Application No	Physical/Policy Constraints	Suitability	Availability	Achievability	Conclusion	Yield
GN30	Former Police Station/Magistrates Court	Larch Road, Blaydon	Blaydon	0.3		Adjacent to conservation area.POS to front, with trees – on perimeters of site and to its frontage. Very mature trees immediately behind the site which could overshadow any future housing – therefore, need for a buffer between Dene and potential houses.	Careful layout and construction techniques to protect existing trees.	N	In area of market demand, viability assessment positive. Site not currently available - is now a dance studio	Suitable but not developable / deliverable	0
GN31	Derwentside Nursing Home	Swalwell Bank, Swalwell	Whickham North	0.4		Any new development would need to have regard to the significant levels across the site. Landscaped frontage should be maintained, along with trees. Large house to southern side has overlooking windows close to boundary. Also consider amenity of adjacent	With some mitigation, and once industrial estate area reclassified. Existing building sits well in landscaped gardens – presents an attractive element to this part of Swalwell Bank.	N - may be available in medium to long term	May be	Suitable and Developable	21
GN32	West of Birtley Golf Course	Durham Road, Birtley	Birtley	6.6		Development of this area of neighbourhood open space would be undesirable as is valuable in terms of visual amenity and recreational use. In addition the loss of accessible natural greenspace would need to be created elsewhere if it were developed.	Not suitable due to open space designation	N	Viability assessment positive however site unsuitable due to policy constraints	Unsuitable	0

Ref.	Site Name	Site Address	Ward	Net Area (ha)	Planning Application No	Physical/Policy Constraints	Suitability	Availability	Achievability	Conclusion	Yield
GN33	Park Gate Farm	Winlaton	Blaydon	0.4		Site lies within Axwell Park Conservation Area.	Traditional farmstead with old stone barns. However, in a mixed housing area. Grassed frontage to site contributes to visual amenity of area, along with perimeter trees. Winton House opposite was award winning for its design, so a good point of reference.	N	n/a	Suitable but not developable / deliverable	0
GN34	Jennings Ford	Derwentwater Road	Dunston and Teams	1.8		Flood Risk; Noise; Contamination. The site also suffers from a degree of severance when considering it's connectivity to local centre's and facilities. While there is a subway under the A184, such facilities are considered poor in terms of personal security	Presents opportunity to enhance. Suitable subject to adequate mitigation.	Y	Viability assessment positive	Suitable and Developable	54
GN35	Viscom House	South Shore Road, Gateshead Quays	Bridges	0.4		Design = positive impact; Tyne Gorge Study ; 10m riverside walkway/ cycleway; Primary Employment Area; Kittiwake tower; Flood Risk	Would be suitable subject to appropriate mitigation	M	Viability assessment is positive	Suitable but not developable / deliverable	0

Ref.	Site Name	Site Address	Ward	Net Area (ha)	Planning Application No	Physical/Policy Constraints	Suitability	Availability	Achievability	Conclusion	Yield
GN36	The Black Bull Public House	Lingey Lane, Wardley	Wardley and Leam Lane	0.6	DC/13/00587/FUL	Access; traffic generation; noise; surface water flooding	Fairly modern volume housebuilder estates at Wardley, along with older Council housing in Leam Lane estate. Site could produce its own identity. Would need to have regard to impact on adjacent dwelling.	N	Viability assessment negative. Site also not available as it is being redeveloped for a care home	Suitable but not developable / deliverable	0
GN38	Land South of G300	Portobello, Birtley	Birtley	1.4	DC/06/00595/COU	Noise from motorway Noise from motorway services Noise from adj industry Appeal history	Residential would not be compatible with surrounding landuses	N	Viability assessment positive however site unsuitable for residential	Unsuitable	0
